YUCCA GARDENS

One in a series.....

## *Yucca cernua*

*Purchased out of New Mexico as a small plant grown via tissue culture.*

Nodding Texas Yucca (*Yucca cernua*) is a newly discovered Yucca species from the Big Thicket of east Texas. A rather rare and beautiful plant with gorgeous blue-green foliage which blooms early in the summer with 8 to 10 foot tall flower spike of ivory-white flowers. In habitat, it grows in the dappled shade of the tall Loblolly pines (*Pinus taeda*) and is why I planted mine where it gets filter light from a nearby tree until nearly one o'clock.
